NOTES:

- The waveguide cover is fragile. Care should be taken when cleaning inside the oven to ensure that it is not damaged.
- After cooking fatty foods without a cover, always clean the cavity and especially the grill heating element thoroughly, these must be dry and free from grease. Built-up grease may overheat and begin to smoke or catch fire.
- Always operate the oven with the turntable fitted correctly. This promotes thorough, even cooking. A badly fitted turntable may rattle, may not rotate properly and could cause damage to the oven.
- The turntable rotates clockwise or anti-clockwise. The rotary direction may change each time you start the oven. This does not affect cooking performance.
- When you order accessories, please quote both the PART NAME and MODEL NUMBER to your dealer or SHARP approved service facility. The model number is located at the bottom of the control panel.

WARNING:
The door, outer cabinet, oven cavity, accessories and dishes will become very hot during operation. To prevent burns, always use thick oven gloves.

IMPORTANT SAFETY INSTRUCTIONS

PLEASE READ CAREFULLY AND KEEP FOR FUTURE REFERENCE

Oven Use:
- The oven is for domestic food use only.
- Never operate when empty, except as directed in the ‘Heating without food’ section on page 12.
- Do not leave or store anything inside the oven when not in use.
- Never attempt to use the oven with the door open. It is important not to force or tamper with the door safety latches.
- Never operate the oven with any object caught in the door.
- Do not insert fingers or objects in the holes of the door latches or air-vent openings as this may damage the oven and cause an electric shock.
- If water or food drops inside the air vent openings switch the oven off immediately, unplug it and call a SHARP approved service facility. (See page 36).
- Never move the oven while it is operating.
- The door, outer cabinet, oven cavity, turntable, dishes, accessories and especially the grill will become very hot during operation. Care should be taken to avoid touching these areas. To prevent burns, always use thick oven gloves. Before cleaning make sure they are not hot.

Pacemaker: If you have a heart pacemaker, consult your doctor or the pacemaker manufacturer prior to oven use.

WARNING: Only allow children to use the oven without supervision when adequate instructions have been given so that the child is able to use the oven in a safe way and understands the hazards of improper use. Accessible parts may become hot during use. Young children should be kept away.

WARNING: Liquids and other foods must not be heated in sealed containers since they are liable to explode. Microwave heating of beverages can result in delayed eruptive boiling, therefore care has to be taken when handling the container. Stir the liquid prior to and during heating/ reheating, let liquid stand for at least 20 seconds in the oven after cooking.

FIRE: If smoke is observed, switch off and unplug the appliance and keep the door closed in order to stifle any flames.

INSTALLATION

WARNING:
Inspect the Oven:
- Check the oven carefully for damage before and regularly after installation.
- Make sure the door closes properly, that it is not misaligned or warped.
- Check the hinges and door safety latches are not broken or loose.
- Ensure the door seal and sealing surfaces are not damaged. If the door or door seals are damaged, the oven must not be operated until it has been repaired by a competent person.
- Inspect the oven interior and door for dents.

IMPORTANT:
If any damage is apparent, do not operate the oven in any way, until it has been repaired by a SHARP trained engineer.

1. Remove all packing materials including the feature sticker (if applicable). The waveguide cover prevents food and grease from entering the waveguide area where it could cause damage. DO NOT REMOVE THE WAVEGUIDE COVER.
2. The oven door will become hot during cooking. Place or mount the oven so that the bottom of the oven is 85cm or more above the floor. Ensure the surface or mounting
INSTALLATION

5. Make sure the power supply cord is undamaged (See “ELECTRICAL CONNECTION” below). Do not allow the power supply cord to run over any hot or sharp surfaces, such as the hot air vent area at the top rear of the oven.

6. The socket must be readily accessible so that it can be easily unplugged in an emergency.

7. Do not use the oven outdoors.

BUILDING-IN-KIT.
An installation frame is available which enables the microwave oven to be integrated within a kitchen unit. The microwave oven is not designed to be built above or near a conventional oven. SHARP recommend the use of the build in kit EBR-9910 (for R-959M) or EBR-99ST (for R-98STM-A), available from your SHARP dealer. Only the use of this frame will guarantee the quality and safety of the oven.

ELECTRICAL CONNECTION.
• Do not allow water to come into contact with the power supply cord or plug.
• Insert the plug properly into the socket.
• Do not connect other appliances to the same socket using an adaptor plug.
• If the power supply cord is damaged, it must be replaced by a Sharp approved service facility or a similarly qualified person to avoid a hazard.
• When removing the plug from the socket always grip the plug, never the cord as this may damage the power supply cord and the connections inside the plug.

• If the plug fitted to your oven is a rewirable type and in the event of the socket outlet in your home not being compatible with the plug supplied, remove the plug properly (do not cut off).
• If the plug fitted to your oven is a non-rewirable type and in the event of the socket outlet in your home not being compatible with the plug supplied, cut-off the mains plug.
• Refit with a suitable type, observing the wiring code given in ‘To replace the mains plug’ on page 36.

WARNING: THIS APPLIANCE MUST BE EARTHED
To wire an appropriate plug, follow the wiring code given in ‘To replace the mains plug’ on page 36.

IMPORTANT!
• The fuse from the cut-off plug should be removed and the plug disposed of in a safe manner.
• Under no circumstances should the cut-off plug be inserted into a socket outlet as a serious electric shock may occur.
• The plug must not be used without the fuse cover fitted.
• If you have any doubt about your microwave oven obtain the help of a qualified electrician.
• When replacing the plug please ensure that you use a BSI or ASTA approved plug to BS1363, this should be fitted with a brown coloured 13 amp fuse approved by BSI or ASTA to BS1362. If you have any doubt about electrical connection seek the help of a qualified electrician.
HEATING CATEGORY

The heating category (a letter A to E) developed by MAFF (Ministry of Agriculture, Fisheries and Food) with microwave oven and food manufacturers indicates the ability of the oven to heat small quantities of food (up to 500g [1lb 2oz]). It does not represent the general performance of the oven.

HOW YOUR OVEN WORKS

Microwaves are energy waves, similar to those used for TV and radio signals.
Electrical energy is converted into microwave energy, which is directed into the oven cavity via a waveguide. To prevent food and grease entering the wave guide it is protected by the waveguide cover.
Microwaves cannot pass through metal, because of this the oven cavity is made of metal and there is a fine metal mesh on the door.
During cooking the microwaves bounce off the sides of the oven cavity at random.

Microwave will pass through certain materials, such as glass and plastic, to heat the food. (See ‘Suitable Cookware’ on page 30).
Water, sugar and fat in food absorb microwaves which cause them to vibrate. This creates heat by friction, in the same way your hands get warm when you rub them together.
The outer areas of the food are heated by the microwave energy, then the heat moves to the centre by conduction, as it does in conventional cooking. It is important to turn, rearrange or stir food to ensure even heating.
Once cooking is complete, the oven automatically stops producing microwaves.
Standing time is necessary after cooking, as it enables the heat to disperse equally throughout the food.
BEFORE OPERATION

Your oven has an energy save mode.

1. Plug in the oven. Nothing will appear on the display at this time.

2. Open the door. The display will flash the message shown.

3. Close the door. The display will show “. 0”.

NOTE: When new, the very first time the grill and convection are used, smoke and odour will be given off. To avoid this happening when food is being cooked, heat the oven without food for approx. 20 minutes. (Please refer to “Heating without food” on page 12.)

</tbody>
</table>

- Your oven has 5 power levels, as shown opposite.
- To change the power level for cooking, enter the cooking time and then press the MICRO. POWER key.

Power level:
The microwave power level is varied by the microwave energy switching on and off. When using power levels other than 100% you will be able to hear the microwave energy pulsing on and off as the food cooks or defrosts.

IMPORTANT: The microwave power level will cook at 100% unless you press the MICRO. POWER key to the desired setting.

Check the power level:
To check the microwave power level during cooking, press the MICRO. POWER key. As long as your finger is pressing the MICRO. POWER key the power level will be displayed. The oven continues to count down although the display will show the power level.
ENERGY SAVE MODE

Your oven has an Energy Save Mode. This facility saves electricity when the oven is not in use.

- If the oven is not used, it will default to Energy Save Mode after 3 minutes. The display is blank and the oven cannot be operated.
- To operate the oven, open and then close the door. "0" will be displayed and the oven is ready to use.

To cancel Energy Save Mode, set the clock. (Please refer to page 9.)

To cancel the clock, follow the procedure opposite. (This will restart Energy Save Mode.)

Notes:
- If you unplug your oven at any stage you will have to reset the clock to cancel Energy Save Mode.
- If the clock has been set, cancelling Energy Save Mode, then your oven has a safety feature which prevents the START/AUTO MINUTE key from working if the oven has not been in use for more than 3 minutes. Press the STOP/CLEAR key or open and close the door to re-use the oven.

1. Time of day appears on the display.

2. Press the AUTO START/CLOCK key once.

3. Press the AUTO START/CLOCK key again.

4. Press the START/AUTO MINUTE key once. The power will be off and the display will show nothing.
SETTING THE CLOCK

Your oven has a 12 hour clock.

- To select the 12 hour clock, press the AUTO START/CLOCK key once.

To set the time of day follow the instructions opposite.

1. Select the clock.

2. Enter the hours by pressing the TIME keys.

3. Press the AUTO START/CLOCK key again.

4. Enter the minutes by pressing the TIME keys.

5. To start the clock, press the AUTO START/CLOCK key again.

NOTES:

- Press the STOP/CLEAR key if you make a mistake during programming.
- If you press any of the TIME keys too many times, continue to press the key until the desired time re-appears.
- To check the time of day during a cooking process, press the AUTO START/CLOCK key and the time of day will remain on the display as long as you keep your finger on the key. This does not affect the cooking process.
- If the clock is set, when cooking is complete, the display will show the correct time of day. If the clock has not been set, the display will only show “.0” when cooking is complete.
- If the electrical power supply to your microwave oven is interrupted, the display will intermittently show “.0” after the power is reinstated. If this occurs during cooking, the programme will be erased. The time of day will also be erased.
- When you want to reset the time of day, follow the opposite example again.
Opening and closing the door:
To open the oven door, pull the door opening handle.

Starting the oven:
Close the door and press the START/AUTO MINUTE key.

Stopping the oven:
If you want to stop the oven during cooking, press the STOP/CLEAR key once or open the oven door. If you want to cancel the cooking programme, press the STOP/CLEAR key twice.

Your oven enables you to cook and defrost food using the automatic programmes, or to cook and defrost food manually. Automatic cooking and defrosting allows you to cook and defrost using preset programmes where the timings have been calculated for you, e.g. Express Cook and Express Defrost.

Manual cooking and defrosting allows you to cook/defrost foods and weights which are not included in the automatic programmes. The following are examples of manual cooking and defrosting. For automatic cooking and defrosting refer to pages 18 - 23.

MANUAL COOKING
- Enter the cooking time.
- Select the cooking mode; MICROWAVE, GRILL, CONVECTION, DUAL GRILL and DUAL CONVECTION can be selected.
- Stir or turn the food, where possible, 2 - 3 times during cooking, if required.
- After cooking, cover the food and leave to stand, if required.
- Refer to the cooking charts in the cookbook section, pages 39 - 44.

Example:
To cook for 2 minutes 30 seconds on 70% microwave power.

1. Enter the cooking time by pressing the 1 MIN. key twice, then the 10 SEC. key three times.

2. Input the power level by pressing the MICRO. POWER key twice.

3. Press the START/AUTO MINUTE key once to start cooking.

The display will count down through the cooking time.
HOW TO OPERATE YOUR OVEN

MANUAL DEFROSTING

- Enter the defrosting time and use microwave power levels 10% or 30% to defrost (refer to page 7).
- Stir or turn the food, where possible, 2 - 3 times during defrosting.
- After defrosting, cover the food in foil and leave to stand until thoroughly defrosted.
- Refer to the defrosting charts in the cookbook section, page 38.

Example:
To defrost for 10 minutes on 30% microwave power.

1. Enter the defrosting time by pressing the 10 MIN. key once.

   10 min. x1

2. Input the power level by pressing the MICRO. POWER key 4 times.

   MICRO. POWER x4

3. Press the START/AUTO MINUTE key once to start defrosting.

   START/AUTO MINUTE x1

The display will count down through the defrosting time.

NOTES FOR MANUAL COOKING AND DEFROSTING:

- When the oven starts, the oven lamp will light and the turntable will rotate clockwise or anti-clockwise.
- Your oven can be programmed up to 99 minutes, 90 seconds (99.90).
- NOTE: If you cook food for more than the standard time (see chart on page 34) using the same cooking mode, the oven’s safety mechanisms automatically activate. The microwave power level will be reduced.
- If the door is opened during cooking/defrosting to stir or turn over food, the cooking time on the display stops automatically. The cooking/defrosting time starts to count down again when the door is closed and the START/AUTO MINUTE key is pressed.
- When cooking/defrosting is complete, the time of day will reappear on the display, if the clock has been set.
- If you want to know the power level during cooking, press the MICRO. POWER key. As long as your finger is touching the key, the power level will be displayed.
HEATING WITHOUT FOOD

You may detect smoke or a burning smell when using the grill and convection for the first time. This is normal and not a sign that the oven is out of order.

To avoid this problem, when first using the oven, heat the oven without food for 20 minutes on grill and then at convection 250°C.

**IMPORTANT:** During operation, to allow smoke or smells to disperse open a window or switch the kitchen ventilation on. Make sure there is no food in the oven.

1. Enter the required heating time by pressing the **10 MIN.** key twice.

   ![10 MIN. x2](image)

2. Select **GRILL** or **CONVECTION** once.

   ![GRILL x1 OR CONV. (°C) x1](image)

3. Press the **START/AUTO MINUTE** key once to start the operation.

   ![START/AUTO MINUTE x1](image)

The display will count down when the oven has finished the operation, open the door to cool the oven cavity.

**WARNING:**

The door, outer cabinet, oven cavity, and accessories will become very hot during operation. Take care to avoid burns when cooling the oven down after operation.
GRILL COOKING

The grill at the top of the oven cavity has one power setting only. The grill is assisted by the turntable which rotates simultaneously to ensure even browning.
Use the racks for grilling small items of food such as bacon, gammon and teacakes, turn over halfway through grilling.
Food can be placed either directly onto the racks, or into a flan dish/heat-resistant plate on the racks.

NOTES:
• It is not necessary to preheat the grill before cooking.
• Follow the recommended grilling times and procedures in the charts on page 43 in the cookbook section.
• When browning foods in a deep container, place on the turntable or low rack.
• The shelves are not suitable for grill cooking.
• After cooking is complete the cooling fan will continue working for a short time to lower the temperature of the electrical and mechanical parts. The display may show “NOW COOLING”.

Example:
To grill for 20 minutes, using GRILL.

1. Enter the grilling time by pressing the 10 MIN. key twice.

![Image of 10 min. x2]

2. Select GRILL by pressing the GRILL key once.

![Image of GRILL]

3. Press the START/AUTO MINUTE key once to start grilling.

![Image of START/AUTO MINUTE]

The display will count down through the grilling time.

⚠️ WARNING:
The door, outer cabinet, oven cavity, accessories and dishes will become very hot during operation. To prevent burns, always use thick oven gloves.
PREHEATING THE OVEN

Your oven can be preheated to a desired temperature prior to convection cooking.

NOTES:
• When the oven is preheating, the turntable should be in the oven.
• When the oven reaches the desired temperature, the audible signal will sound and the temperature will be displayed in °C. **Do not press the STOP/CLEAR key after opening and closing the door, as this will cancel the Convection mode.**
• The preheated temperature will be maintained for approximately 30 minutes. After this time, preheat will be cancelled.
• During preheating and convection cooking, you will hear the cooling fan cycling on and off. This is completely normal and will not affect the cooking.
• You can check the actual temperature during preheating by pressing the CONV. (°C) key. The temperature will appear on the display. This will not affect the oven operation.
• If you prefer not to preheat the oven where recommended in the cookbook section, allow extra cooking time.
• Temperature measurements taken whilst the oven is in convection mode will differ from the displayed level. This will not affect the cooking results as long as the operation manual and cookbook section are followed correctly.

Example:
To preheat the oven to 180°C.

1. Enter the temperature by pressing the CONV. (°C) key 6 times.

   ![CONV. (°C) x6 180°C](image)

   

2. Press the START/AUTO MINUTE key once to start preheating.

   ![START/AUTO MINUTE x1 PREHEAT](image)

3. When the oven reaches 180°C, the audible signal will sound and the oven will display 180°C. Place food in the oven, enter the desired cooking time and press the START/AUTO MINUTE key.

   ![180°C](image)

NOTE FOR SHELVES:
When using the shelves follow the notes below:
• The correct position for the shelves is 1 and 2, as shown in the diagram below.
• Do not place food weighing more than 5kg on the shelves.
• When removing the food, pull the shelf until it is slightly locked, then remove the food.

WARNING:
The door, outer cabinet, oven cavity, accessories and dises will become very hot during operation. To prevent burns, always use thick oven gloves.
CONVECTION COOKING

The temperatures available in °C are:
250°C, 230°C, 220°C, 200°C, 190°C,
180°C, 160°C, 130°C, 100°C, 40°C.

Convection cooking is ideal for cooking cakes, buns,
biscuits, scones and for proving bread at 40°C.

To achieve the best results when cooking by CONVECTION:
• Use the lower shelf for one layer cooking unless
  food manufacturer’s instructions differ.
• Use the lower and upper shelves for two layer
  cooking.
• Rotate the cookware 180 degrees after half the
  cooking time.
• Where possible, place food in its container
  directly onto the shelf.
• The turntable should be in the oven when using
  the shelves.
• Although this product is a conventional
  convection oven, consideration has to be given
  to the smaller size and power of the product in
  comparison to a standard kitchen oven, so the
  final result may vary.
• When cooking chilled or frozen foods on
  CONVECTION mode, allowance must be given
  to heat loss after the preheat cycle due to the
  insertion of the food.

NOTES:
• When the oven is preheating, the turntable
  should be in the oven.
• When using the CONV. (°C) key, all metal
  cookware can be used. (See ‘Suitable Cookware’
  on page 30).
• Follow convection times and procedures in the
  charts and recipes in the cookbook section.
• Food manufacturers instructions are only a guide-
  line, so cooking times may need to be adjusted.
• Pressing the CONV. (°C) key during cooking
  will display the programmed temperature. This
  will not affect the programme or cooking time.
• Always check the food is piping hot before
  consuming.
• After cooking is complete the cooling fan will
  continue working for a short time to lower the
  temperature of the electrical and mechanical
  parts. The display may show “NOW COOLING”.
• Heat generated by the oven during convection
  cooking may cause the backplate of the oven to
  discolor. This is completely normal and will not
  affect the performance of the oven.

Example:
To cook for 20 minutes at 200°C convection.
1. Enter the cooking time by pressing the
  10 MIN. key twice.

2. Input the temperature by pressing the
  CONV. (°C) key 4 times.

3. Press the START/AUTO MINUTE key
   once to start cooking.

The display will count down
through the cooking time.

NOTE FOR USING SHELVES:
When using the shelves follow the
notes below to prevent them
slipping out:
• The correct position for the
  shelves is 1 and 2, as shown
  in the diagram.
• Do not place food
  weighing more than 5kg
  on the shelves.
• When removing the food,
  pull the shelf until it is slightly
  locked, then remove the food.

WARNING:
The door, outer cabinet, oven cavity,
accessories and dishes will become very
hot during operation. To prevent burns,
always use thick oven gloves.
Dual Cook combines microwave power with convection or the grill. The combination of microwave power with convection or the grill reduces cooking time and provides a crisp, brown finish.

There are two Dual Cook modes:
1. Dual Convection - Convection with microwave.
2. Dual Grill - Grill with microwave.

To select the Dual Cook mode required, enter the cooking time and follow the table below.

<table>
<thead>

NOTES:
- For DUAL GRILL it is not necessary to preheat the grill.
- Use the high rack and low rack for Dual Cooking (refer to the cooking charts on pages 37 - 94 in the cookbook section.)
- The shelves are not suitable for Dual Cooking.
- Follow the recommended dual cooking times and procedures in the charts on pages 40 - 43 in the cookbook section.
- When browning foods in a deep container, place on the turntable or low rack.
- Temperature measurements taken whilst the oven is in convection mode will differ from the displayed level. This will not affect the cooking results as long as the operation manual and cookbook section are followed correctly.

MICROWAVE COOKING ADVICE

Microwaves cook food faster than conventional cooking. It is therefore essential that certain techniques are followed to ensure good results.

Many of the following techniques are similar to those used in conventional cooking.

COOKING ADVICE NOTES:
- Always attend the oven when in use.
- Ensure that the utensils are suitable for use in a microwave oven. (See “Suitable Cookware” on page 30).
- Refer to the charts in the cookbook section for recommended cooking times and power levels.
- Do not place hot foods/utensils on a cold turntable or cold foods/utensils on a hot turntable.
- Liquids and foods must not be heated in sealed containers or jars/containers with lids on, as pressure will build up inside and may cause the container/jar to explode.
- Only use microwave popcorn within the recommended packaging (follow the manufacturers instructions). Never use oil unless specified by the manufacturer and never cook for longer than instructed.

WARNING:
Follow instructions in the SHARP operation manual at all times.
If you exceed recommended cooking times and use power levels that are too high, food may overheat, burn and in extreme circumstances, catch fire and damage the oven.

Cooking Techniques

| Arrange | Place the thickest parts of food towards the outside of the dish. e.g. Chicken drumsticks.
| Cover  | Certain foods benefit from being covered during microwave cooking, follow recommendations where given.
| Pierce | Foods with a shell, skin or membrane must be pierced in several places before cooking or reheating as steam will build up and may cause food to explode.
| Stir, turn and rearrange | For even cooking it is essential to stir, turn and rearrange food during cooking. Always stir and rearrange from the outside towards the centre.
| Stand  | Standing time is necessary after cooking so it enables the heat to disperse equally throughout the food.

NOTE: Eggs in their shells and hard / soft boiled eggs should not be heated in the microwave oven as they may explode, even after cooking has ended.
MICROWAVE COOKING ADVICE

<table>
<thead>
<tr>
<th>Food Characteristics</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Composition</td>
<td>Foods high in fat or sugar (e.g. Christmas pudding, mince pies) require less heating time. Care should be taken as overheating can lead to fire. Bones in food conduct heat, making the food cook more quickly. Care must be taken so that the food is cooked evenly.</td>
</tr>
<tr>
<td>Density</td>
<td>Food density will affect the amount of cooking time needed. Light porous foods, such as cakes or bread, cook more quickly than heavy, dense foods, such as roasts and casseroles.</td>
</tr>
<tr>
<td>Quantity</td>
<td>The number of microwaves in your oven remains the same regardless of how much food is being cooked. The cooking time must be increased as the amount of food placed in the oven increases. e.g. Four potatoes will take longer to cook than two.</td>
</tr>
<tr>
<td>Size</td>
<td>Small foods and small pieces cook faster than large ones, as microwaves can penetrate from all sides to the centre. For even cooking make all the pieces the same size.</td>
</tr>
<tr>
<td>Shape</td>
<td>Foods which are irregular in shape, such as chicken breasts or drumsticks, take longer to cook in the thicker parts. For even cooking, place the thickest parts to the outside of the dish where they will receive more energy. Round shapes cook more evenly than square shapes when microwave cooking.</td>
</tr>
<tr>
<td>Temperature of food</td>
<td>The initial temperature of food affects the amount of cooking time needed. Chilled foods will take longer to cook than food at room temperature. e.g. A cake made with chilled ingredients, (i.e. margarine) will take longer to cook than a cake made with ingredients at room temperature. The temperature of the container is not a true indication of the temperature of the food or drink. Cut into foods with fillings, for example jam doughnuts, to release heat or steam.</td>
</tr>
</tbody>
</table>

Face & Hands: Always use oven gloves to remove food or cookware from the oven. Stand back when opening the oven door to allow heat or steam to disperse. When removing covers (such as cling film), opening roasting bags or popcorn packaging, direct steam away from face and hands.

Check the temperature of food and drink, stir before serving. Take special care when serving to babies, children or the elderly. The contents of feeding bottles and baby food jars are to be stirred or shaken and the temperature is to be checked before consumption to avoid burns.
**SUITABLE COOKWARE**

To cook/defrost food in a microwave oven, the microwave energy must be able to pass through the container to penetrate the food. Therefore it is important to choose suitable cookware.

Round/oval dishes are preferable to square/oblong ones, as the food in the corners tends to overcook. A variety of cookware can be used as listed below.

DEFROSTING ADVICE

Defrosting food using your microwave oven is the quickest method of all. It is a simple process but the following instructions are essential to ensure the food is thoroughly defrosted.

<table>
<thead>
<tr>
<th>Action</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rearrange</td>
<td>Foods that are placed towards the outside of the dish will defrost quicker than foods in the centre. It is therefore essential that the food is rearranged up to 4 times during defrosting. Move closely packed pieces from the outside to the centre and rearrange over-lapping areas. This will ensure that all parts of the food defrosts evenly.</td>
</tr>
<tr>
<td>Separate</td>
<td>Foods may be stuck together when removed from the freezer. It is important to separate foods as soon as it is possible during defrosting. e.g. bacon rashers, chicken fillets.</td>
</tr>
<tr>
<td>Shield</td>
<td>Some areas of food being defrosted may become warm. To prevent them becoming warmer and starting to cook, these areas can be shielded with small pieces of foil, which reflect microwaves. e.g. legs and wings on a chicken.</td>
</tr>
<tr>
<td>Stand</td>
<td>Standing time is necessary to ensure food is thoroughly defrosted. Defrosting is not complete once the food is removed from the microwave oven. Food must stand, covered, for a length of time to ensure the centre has completely defrosted.</td>
</tr>
<tr>
<td>Turn over</td>
<td>It is essential that all foods are turned over at least 3 - 4 times during defrosting. This is important to ensure thorough defrosting.</td>
</tr>
</tbody>
</table>

NOTES:
- Remove all packaging and wrapping before defrosting.
- To defrost food, use microwave power levels 30% or 10%.
- Please refer to the defrosting chart on page 38 for further information.
# REHEATING ADVICE

For the reheating of foods, follow the advice and guidelines below to ensure food is thoroughly reheated before serving.

| Plated meals | Remove any poultry or meat portions, reheat these separately, see below.  
|              | Place smaller items of food to the centre of the plate, larger and thicker foods to the edge. Cover with vented microwave cling film and reheat on 50%, stir/rearrange halfway through reheating.  
|              | **NOTE:** Ensure the food is thoroughly reheated before serving. |

| Sliced meat | Cover with vented microwave cling film and reheat on 50%. Rearrange at least once to ensure even reheating.  
|            | **NOTE:** Ensure the meat is thoroughly reheated before serving. |

| Poultry portions | Place thickest parts of the portions to the outside of the dish, cover with vented microwave cling film and reheat on 70%.  
|                 | Turn over halfway through reheating.  
|                 | **NOTE:** Ensure the poultry is thoroughly reheated before serving. |

| Casseroles | Cover with vented microwave cling film or a suitable lid and reheat on 50%.  
|           | Stir frequently to ensure even reheating.  
|           | **NOTE:** Ensure the food is thoroughly reheated before serving. |

To achieve the best results when reheating, select a suitable microwave power level appropriate to the type of food. e.g. A bowl of vegetables can be reheated using 100%, while a lasagne which contains ingredients that cannot be stirred, should be reheated using 50%.

**NOTES:**
- Remove food from foil or metal containers before reheating.
- Reheating times will be affected by the shape, depth, quantity and temperature of food together with the size, shape and material of the container.

> **Never heat liquids in narrow-necked containers, as this could result in the contents erupting from the container and may cause burns.**

- To avoid overheating and fire, special care must be taken when reheating foods with a high sugar or fat content, e.g. mince pies or Christmas pudding.
- Never heat oil or fat for deep frying as this may lead to overheating and fire.
- Canned potatoes should not be heated in the microwave oven, follow the manufacturer’s instructions on the can.

> **The contents of feeding bottles and baby food jars are to be stirred or shaken and the temperature is to be checked before consumption to avoid burns.**
CLEANING & MAINTENANCE

OVEN INTERIOR
- It is important to clean the interior of your microwave oven after each use.
- To clean the oven interior, use a mild detergent solution, such as washing-up liquid, with warm water on a soft cloth.
- Heat up your oven regularly by using the convection and grill, refer to “Heating without food” on page 12. Remaining food or fat splashed can cause smoke or bad smell.
- Food and liquid splashes will build-up on the oven walls and ceiling. If grease, fat and food debris is allowed to build-up in the oven interior it may overheat, smoke or even catch fire when next using the oven.
- Keep the waveguide cover clean at all times. The waveguide cover is constructed from a fragile material and should be cleaned with care (follow the cleaning instructions above).
- Note: Excessive soaking may cause disintegration of the waveguide cover.
- The waveguide cover is a consumable part and without regular cleaning, will need to be replaced.
- Food will release steam during cooking and cause condensation inside the oven and door. It is important to wipe the oven dry. A build-up of condensation will eventually lead to rust forming on the oven interior.
- Do not allow grease or dirt to build-up on the door seals or areas around the door.

Cleaning tip - For easier cleaning of your oven:
Place half a lemon in a bowl, add 300ml (1/2 pint) water and heat on 100% for 10 - 12 minutes. Wipe the oven clean using a soft, dry cloth.

OUTER CABINET
- Wipe the outside of the microwave oven with a mild detergent solution, such as washing-up liquid, with warm water on a soft cloth.
- The control panel must be wiped clean and dried with the door open, therefore inactivating the oven.

NOTES:
- Never use spray cleaners, oven pads or abrasive scourers as these damage the surface of the oven.
- A steam cleaner should not be used.
- Take care not to let soapy water drip through the small holes in the oven walls and the cavity floor. Excess water spillage through these holes will cause damage to the oven interior.
- Slight tarnishing of the oven cavity, around the area of the grill, is likely to occur. This is normal and will not affect the oven's performance.

WARNING:
Before cleaning, make sure the oven cavity, door, oven cabinet and accessories are completely cool.

This may prevent the door from closing correctly and may cause a leakage of microwaves (follow the cleaning instructions).
- Ensure the accessories are cleaned after every use with a mild washing-up liquid solution and dried. This will prevent the build-up of grease and food debris. The accessories are dishwasher safe.
- Keep the waveguide cover and accessories clean at all times. If you leave grease or fat in the cavity or accessories, it may overheat, cause arcing, smoke or even catch fire when next using the oven.

SPECIAL NOTE for TURNTABLE SUPPORT
After cooking, always clean the turntable support, especially around the rollers. These must be free from food splashes and grease. Built-up splashes or grease may overheat and cause arcing, begin to smoke or catch fire.
TROUBLESHOOTING

If you think the oven is not working properly there are some simple checks you can carry out yourself before calling an engineer. This will help prevent unnecessary service calls if the fault is something simple.

Follow this simple check below:
Place half a cup of water on the turntable and close the door. Programme the oven to cook for 1 minute using 100% microwave power.

1. Does the oven lamp come on when it is cooking?
2. Does the turntable rotate?
3. Does the cooling fan work? (Check by placing your hand above the air vent openings.)
4. After 1 minute does the audible signal sound?
5. Is the water in the cup hot?

Take the cup of water out of the oven and close the door. Programme the oven to cook for 3 minutes using the grill.

6. After 3 minutes, does the grill heating element become red?

Programme the oven to cook for 3 minutes using the convection on 250°C.

7. After 3 minutes, is the oven cavity hot?

If you answer “NO” to any question first check that the oven is plugged in properly and the fuse has not blown. If there is no fault with either, check against the troubleshooting chart on the following page.

NOTES:
• If you cook food for more than the standard time (see chart opposite) using the same cooking mode, the oven’s safety mechanisms automatically activate. The microwave power level will be reduced or the grill heating element will turn on and off.
• After manual or automatic cooking using the Grill, Dual Cook or Convection modes, the cooling fan will switch on to cool the oven cavity. When the cooling fan works, the display will return to the time of day, if set. During these modes, the cooling fan will carry on working after you have pressed the STOP/CLEAR key. You may feel hot air blowing out of the air-vent openings.

WARNING:
Never adjust, repair or modify the oven yourself. It is hazardous for anyone other than a SHARP trained engineer to carry out servicing or repairs.

This is important as it may involve the removal of covers that provide protection against microwave energy.

• The door seal stops microwave leakage during oven operation, but does not form an airtight seal. It is normal to see drops of water, light or feel warm air around the oven door. Food with a high moisture content will release steam and cause condensation inside the door which may drip from the oven.
• Repairs and Modifications: Do not attempt to operate the oven if it is not working properly.
• Outer Cabinet & Lamp Access: Never remove the outer cabinet. This is very dangerous due to high voltage parts inside which must never be touched, as this could be fatal.

Your oven is not fitted with a lamp access cover. If the lamp fails, do not attempt to replace the lamp yourself, call a SHARP approved service facility.

IMPORTANT:
If the display is blank and has gone dark, even if the power plug is properly connected, the oven may be in Energy Save Mode. To cancel it, open and then close the oven door, see page 8.

TO REPLACE THE MAINS PLUG

The wires in the mains cable are colour coded as shown:
Green and yellow stripes = EARTH
Blue = NEUTRAL
Brown = LIVE

As the colours in the mains lead of your oven may not correspond with the coloured marking identifying the terminals in your plug, connect the wires as described:
• The green and yellow wire to the plug terminal marked E or or coloured green or coloured green and yellow.
• The blue wire to the plug terminal marked N or coloured black or coloured blue.
• The brown wire to the plug terminal marked L or coloured red or coloured brown.

Make sure the terminal screws are tight and the cable is held securely by the cable grip where it enters the plug.
Like most appliances in your home, your oven must be connected to a single phase 230-240V, 50Hz alternating current supply.
If you do not make the proper electrical connections you might damage the oven or injure yourself. Neither SHARP nor the supplier will be liable if this happens.

WARNING: THIS APPLIANCE MUST BE EARTHED
If you have any doubts about your electrical supply ask a qualified electrician.

INTRODUCTION

This Cookbook contains a wide variety of recipes developed specifically for your microwave oven. These will give you successful results and will save time and electricity. The recipes demonstrate the capabilities of your oven and prove that microwave technology combined with grill or convection energy is the efficient and effective alternative to conventional cooking.

The cookery notes below compliment all cooking procedures in this cookbook and should be read in advance of recipe preparation.

COOKBOOK NOTES

- Chilled foods are to be cooked from 5°C. DO NOT COOK FROM FROZEN.
- Ambient/fresh/dried/canned foods are to be cooked from 20°C. DO NOT COOK FROM FROZEN.
- Frozen foods are to be cooked from -18°C.
- Please weigh all foods prior to defrosting and cooking, as labelled weights are only approximate.
- Cooking times in the charts and recipes are based on standard conditions. Cooking results will vary according to the condition of foods, utensils and the oven. Please check the cooking result and, if necessary, adjust cooking times accordingly.
- When cooking Rice & Pasta (see page 39), cooking time is constant for any quantity of rice or pasta; boiling water must be adjusted according to quantity of rice or pasta. After leaving the Rice/Pasta to stand, rinse in boiling water prior to serving.
- The recipes in this cookbook were developed using chilled eggs and fat. Room temperature ingredients may give a different result.
- Where it is necessary to blend foods, use a food processor, liquidiser or press through a sieve.
- Where dishes are covered, use vented microwave cling film unless otherwise stated. Where dishes are lined, use greaseproof paper unless otherwise stated.
- All serving quantities are approximate.
- Serve all dishes immediately unless otherwise stated.
- For sequence programming refer to the operation manual.
- The door, outer cabinet, oven cavity, turntable, turntable support, dishes and accessories will become very hot during operation. To prevent burns, always use thick oven gloves.
